

Claim

Feeder EZ is a light weight durable single piece aluminum (**feeder hanging system**) that holds 30 to 55 gallon drums or comparable waist containers converted into feed dispensing systems for the purpose of feeding and provide nutrition's to wild game and domestic animals from any single tree trunk.

The Feeder EZ hanging system operates on the principle of placing Feeder EZ against a tree trunk and wrapping the chain around the tree and attaching to the opposite end of the Feeder EZ to the S Hook at its closest and tightest link, the weight of the Feeder EZ and the added weight of the barrel and its Grain or Feed that it contains adds pressure to the chain and causes the entire setup to push into and downward on the tree thus locking the Feeder EZ hanging system securely into place on the tree.
